

PVM - Series 75B Underground Service Manual Pinch Valve

- · Designed for buried service.
- Sealed body and yoke, with no packing to maintain.
- Sleeve is the only wetted part, reduces maintenance.
- Above ground position indicator available for instant position identification.

Materials of Construction

- Body: Cast ironYoke: Carbon steel
- Sleeves: Pure Gum Rubber (PGR), Ethylene Propylene Diene Terpolymer (EPDM), Acrylonitrile-Butadiene (NBR), Fluoroelastomer (FKM), Chloroprene (CR), Chlorosulfonated Polyethylene (CSM), Chloro-Isobutylene-Isoprene (CIIR).

When ordering a 75B, specify which operating option your application requires:

- AWWA nut
- · Handwheel on top with no bevel gear
- · Bevel gear operator
- Bevel gear operator with dial gear position indicator (G.P.I.)

The Series 75B Underground Service Manual Pinch Valve is a reliable, maintenance-free, cost-effective valve designed for tough slurries and abrasive or corrosive chemical applications below ground. This intrinsically safe pinch valve, which was developed specifically for underground service, is sealed with an epoxy coating and can be supplied with an above ground position indicator for instant identification if the valve is open, closed or in the throttled position. There are no seats to grind, no stuffing boxes to repack and no packing glands to adjust with the 75B. The pinching action is on centerline, creating a smooth venturi flow pattern through the valve. The 75B is self-cleaning.

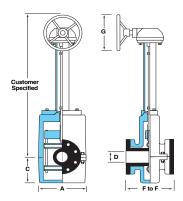

Series 75B Pinch Valves have been in underground service for over 30 years in chemical and sewage treatment facilities. The 75B is virtually maintenance free.

The Series 75B has the same ASME B16.10 face-to-face as gate, plug or ball valves up to 6".

Custom stem extensions, AWWA nuts and floorstands are also available for the Series 75B.
